The International Campaign to Ban Landmines (ICBL) is a global network of non-governmental organizations (NGOs) and dedicated individuals working in more than 100 countries to promote adherence to and implementation of the treaty banning landmines.

We work for a world free of landmines. A world where contaminated land is cleared and returned to local population for productive use. A world where the needs of affected communities and survivors are met and their human rights guaranteed.

Here’s a roundup of some of our mine activities globally. To learn more about our impact and how to help us finish the job and achieve a mine free world, scan:

**Advocating for a Mine Free World Where Needs and Rights of Survivors are Met**

Since 2003, the Iraqi Alliance of Disability Organizations (IADO) conducts research and outreach on the rights of persons with disabilities and brings to light the situation of the more than three million disabled persons in Iraq. IADO works to ensure the rights of persons with disabilities under national and international legislation by creating an appropriate legal environment.

**Tracking Progress Toward a Mine Free World**

The Landmine Monitor was created in 1998 to document progress and challenges in eliminating landmines. It has since become a benchmark for the concept of civil society-based verification. Now known as the Landmine and Cluster Munition Monitor or the Monitor, it tracks implementation of and compliance with the Mine Ban Treaty and the Convention on Cluster Munitions. A broad-based network of individuals, campaigns, and organizations from around the world contribute to Monitor’s research work. With over 35 annual reports published and thousands of country profiles updates, the Monitor is the most comprehensive information on the international community’s response to the problems caused by landmines, cluster munitions, and other explosive remnants of war.

**Making Contaminated Land Safe Again**

Since 1999, the Colombian Campaign Against Mines (CCCM by its acronym in Spanish) has worked to promote the integral development of communities through the promotion of humanitarian disarmament and human security. It carries out comprehensive mine action activities throughout Colombia. CCCM’s work identifying, unearthing, and neutralizing explosive devices directly contributes to restoring peace in conflict-ravaged territories.

**Providing an Immediate and Effective Warning to the Population**

Active in mine action for 25 years, the Swiss Foundation for Mine Action (FSD) provides risk education to communities in mine-affected countries. FSD is currently present in Afghanistan, Iraq, the Philippines, and in Ukraine. FSD promotes risk awareness and safer behavior in heavily contaminated areas by working closely with local communities. Children are a key risk group for risk education activities because they often grow up in contaminated areas but lack knowledge of the risks. Over the years, FSD has reached out to more than 2.6 million people, including more than 1.5 million children.

**Providing Victim Assistance and Advancing the Rights of Survivors, Their Families, and Affected Communities**

In 1982, Humanity & Inclusion (formerly Handicap International, HI) set up its first project to provide services to Cambodian refugees who were injured by anti-personnel landmines. 40 years later, HI is still providing assistance to victims and other persons with disabilities through emergency medical care, rehabilitation & prosthetic and orthotic services, psychological support, as well as facilitating people’s return to school work and other aspects of social life in several countries around the world.
